

ConnectALL

Value Stream Management Solution

A dynamic and tool-agnostic solution to help companies optimize value streams, improve product quality, accelerate delivery, reduce costs, and increase revenue. ConnectALL's VSM solution comprises two key elements that work in sync — the Value Stream Integration Platform and Value Stream Insights.

Value Stream Integration Platform:

An enterprise-class solution that connects all the tools in your software delivery value stream, with built-in vendor adapters and a Universal Adapter for bi-directional or uni-directional data synchronization across the entire value stream.

Value Stream Analytics:

A customizable, data- and analytics-driven solution designed to accelerate delivery of business value. Comprises the Insights Adapter, Insights Analytics, and Insights Services. Designed to help organizations get started with comprehensive insights into their value stream.

Critical Capabilities and Benefits of ConnectALL's VSM Solution

Lean Metrics Tracking and Analysis

Capture and visualize relevant, actionable data for metrics such as flow, lean, DevOps, IT performance and more, allowing you to make better decisions faster.

Workflow Orchestration

Orchestrate actions, such as triggering builds, running automated tests and application releases, and automating change approvals.

Integration with Third-party Tools

Enhance the constant stream of communication between teams by connecting unlimited tools across your software delivery value stream with pre-built and customized adapters.

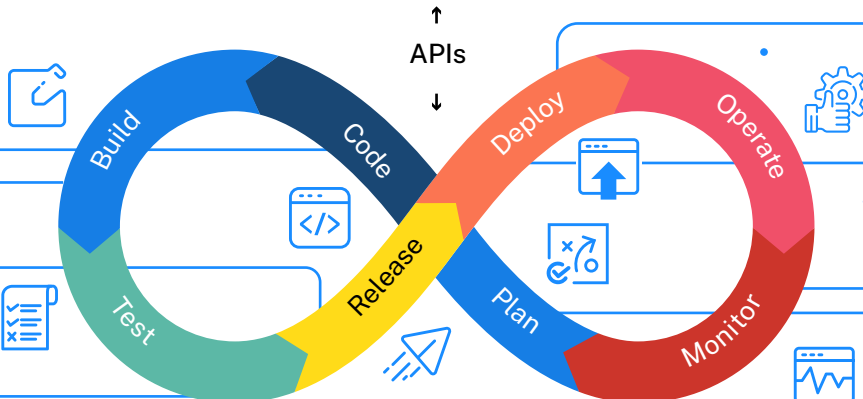

Enforce Governance and Security

Manage better governance by controlling synchronization of data according to specified criteria, decreasing security risks that could affect quality and reliability.

Improve Speed and Quality of Software Delivery with ConnectALL's VSM Solution

Gain end-to-end visibility into the health of your value stream to identify bottlenecks, issues and constraints that impact business outcomes and block the delivery of value.

Align IT and Business Initiatives for Positive Outcomes

Enables alignment of business and IT initiatives to drive positive outcomes with real-time value stream and lean metrics, capturing critical success factors, and end-to-end visibility of key metrics and outcomes across portfolios.

Remove Waste and Reduce Overhead with Actionable and Relevant Data

Measures the activities and outcomes of product value streams to drive continuous improvement efforts with real-time flow of data, identifying bottlenecks impacting the efficient flow, and providing a 'What-If' analysis.

Increase Productivity and Reduce Costs with Data-driven and Outcome-focused Analytics

Provides real-time, data-driven and outcome-focused analytics by automatically capturing data for metrics; uncovering product issues and risks; aiding decision makers with cost reduction, competitive positioning, and product fit in the marketplace; and calculating value stream and lean metrics.

Stay Ahead of Competition with Value Stream Visualization

Provides dynamic visualization of each product value stream and how they interact with one another with end-to-end visibility of every work item, how they evolve, and their relationships with other work items in and across product value streams; the speed and quality of their evolution to customers; and visualization of how the current value stream evolved over time.

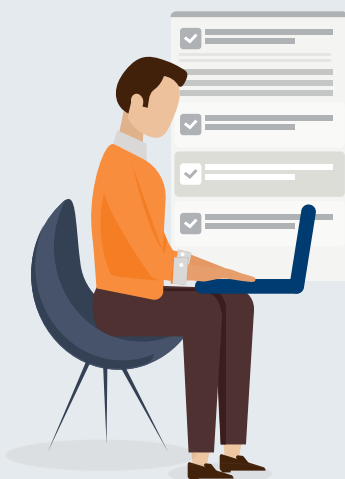

Improve Build Time and Quality with Workflow Orchestration

Helps orchestrate and coordinate automatic triggers like builds, automated tests, and deployments, with centralized control of builds, CI/CD tests, and releases/deployments. Manages scheduling and integration of automated actions and tasks across disparate systems within the value stream, and optimize frequently occurring processes and workflows, helping teams to deploy applications more efficiently.

Achieve Traceability with IT Governance:

Aids in the process of governing IT capabilities by supporting frameworks like ITIL, CMMI, or TQM, with centralized governance over the flow of work across an entire product value stream. Enables management of information security work streams and incidents (by combining frameworks like COBIT and COSO, and ISO 27001).

About ConnectALL

ConnectALL® is a value stream management company dedicated to helping customers achieve higher levels of agility, traceability, predictability and velocity. We do this by connecting people, processes and technology across the software development and delivery value stream, enabling companies to align digital initiatives to business outcomes and improve the speed at which they deliver software. ConnectALL's value stream management solutions and services allow companies to see, measure and automate their software delivery value streams.
